## ABSTRACT

The invention relates to a method of autostereoscopically displaying an N-viewpoint image on a screen having display pixels disposed in rows and columns, each display pixel presenting p > 1 color points, corresponding to first, second, ..., and pth color components, in which method the pixels of an autostereoscopic image to be displayed are displayed by distributing in space the p color points of each pixel amongst the color points of corresponding color components in <u>p</u> different display pixels, the method of the invention starting from a "high definition" autostereoscopic image presenting at least as many pixels having p color points as the N viewpoint image has color points to generate a said autostereoscopic image to be displayed in which each pixel is a color point of the corresponding color component of p different pixels in the high definition autostereoscopic image.
